

(a) Limnological monitoring network (IMARPE)

IMARPE/ALT stations with satellite-field match-ups (2013–2024), coloreadas por la transparencia media measured. The trophic gradient is visible in the field data itself

(b) El esfuerzo de muestreo es muy desigual

Each point is a station. 319 stations, but most were visited in very few campaigns, limiting the power of any station-based analysis
