

(a) No zone shows significant trend in the full record

Annual median transparency in-situ (2011–2024, 734 readings). The vertical dotted lines mark the years no campaign: 2020, 2021 y 2023

(b) The verdict is set by the start year, not the lake

Same Mann-Kendall test, same data, different start year. Starting in 2013 -the year with the lowest medians- in the record- turns two zones into "significantly more transparent"
