

(a) Calibrados... en promedio

Out-of-fold empirical coverage vs nominal. Gray band is ± 3 points

(c) Pero no en los extremos del rango

Split-conformal uses a single global quantile, so the width is constant (~ 6.1 m) and the interval cannot adapt: it undercovers in the clearest water

(b) El intervalo al 90% frente a la medida real

Match-ups ordered by measured transparency. The line is the prediction, the band is the 90% conformal interval. 86 out of 812 points fall outside
